

Custom Build Overview

1. Quick Custom
2. Popular Quick Custom Designs
3. Standard Custom
4. Premium Add-Ons

Design:

- Choose from one of my pre-existing puppet patterns
- Choose from my available fabrics
- You can ask for some modification to the design (such as making the arm length a few inches longer for example) at no additional charge, or additional elements (such as ears, nose, or costumes) that will come at an additional charge
- You'll approve all details in writing and make a deposit payment. Once approved, I'll use those details to create the puppet.

Build: To put the puppet together, I'll mainly use machine stitching and glues. I will incorporate some hand stitching when needed.

Materials: The Quick Custom usually incorporates anti-pill fleece, quality faux furs, and polyfoam.

Quick Custom

2 to 3 weeks build time for a single puppet

Popular Quick Custom Designs

These are my most requested Quick Custom patterns. Ask about other options!

Meep and Mega Meep

- Hand, Hand and Rod, or “mini-live-hand” options
- Simple or professional arm rod, either built-in or removable
- Half-body or full-body

EzPz Pro

- Lightweight sack body
- Half-body or full-body
- Built-in rods recommended, but simple or professional removable options available

Nosey Pro

- Live-hand or Hand and Rod options available
- Half-body or full-body
- Polyfoam structure for the head and body

Design: 2 Rounds of Approval

- Round 1 - Basic Design Approval:
 - You provide example images (either original concept images or inspo pics).
 - I'll propose a puppet design, outlining details such as fabric options, structural design, pricing, etc.
 - We'll discuss, and when ready, you'll approve the puppet details you want and then make a deposit payment.
- Round 2 - Features Approval:
 - Once the base of the puppet has been built, I'll send options for key features (usually facial features or other puppet specific elements) for your approval

Build: I'll put together the interior of the puppet with strong glues like contact cement. For the exterior features, I'll use a combination of machine and hand stitching, and may use glue where needed.

Materials: The Standard Custom usually incorporates anti-pill fleece, quality faux furs, polyfoam, and L200.

Standard Custom

At least 8 weeks (design and build time) for a single puppet

Rush Builds: shorter build timelines

Design and Licensing Rights

Design from Scratch: I create concept images based on your general details

More In-Depth Design and Approval Process: We can increase the number of rounds of notes so that you are involved in more stages throughout the build.
Example rounds: Fabric Samples Round, Foam Prototype Round, Eye Options Round, Last Looks Round.

Muppet grade materials: These are even higher quality materials that you'd see on a Muppet

- Nyla fleece - this is a high quality fabric that should be hand stitched, which will increase build time. At this time, I can only give options of pre-dyed nyla fleece rather than custom dyed.
- Reticulated foam - this is a high quality foam that is known for its durability

Premium Add-Ons
